Professional summary

I am a passionate, fast learner software engineer who focuses on developing high-quality software products. For years I've been working mostly with backend development, ensuring the persistence and availability of data. Strong experience helping businesses grow by writing scalable, testable and good quality code.

Skills

- PHP
- JavaScript
- React

- Phalcon
- REST APIs
- Git

- Docker
- SQL
- AWS (Amazon RDS, Amazon S3, Amazon EC2)

Experience

VIVIAL / Software Engineer

Jul 2019 - PRESENT, Santo Domingo, Dominican Republic

At Vivial, I'm helping the development team with the migration of their legacy platform, built with PHP, Drupal, and MySQL, to a whole new architecture and technology stack, using Node, React, PostgreSQL and AWS. My primary duties are to disable, refactor and add features to the legacy platform, integrating the legacy platform with the microservices from the new one.

MCTEKK, S.R.L / Software Developer

Jul 2017 - Jul 2019, Santo Domingo, Dominican Republic

I started working with MCTEKK as an intern doing server-side tasks for one of the projects being developed by the company, DealerAppCenter. Three months later, they hired me as a backend developer for the same project. My primary duties were to work on designing, implementing and refactoring features for a centralized REST API which served data for different types of clients, including two web apps, two mobile apps, and many classifieds websites.

Also, I joined a different team to work with Canvas, an open source collection of SaaS products for web applications.

Education

Universidad Iberoamericana / Bachelor of Information Technology

August 2017 - Present, Santo Domingo, Dominican Republic

Las Americas Institute of Technology / Software Development Associate's Degree

August 2015 - August 2017, Santo Domingo, Dominican Republic
